TikTok Shop Order Management Portfolio Case Study

1

Overview

Managing orders with accuracy, visibility, and consistent reporting.

The project focused on reviewing TikTok Shop order history, tracking monthly order volume, monitoring fulfillment status, and preparing clear performance notes for business decision-making.

- Checked order volume by monthly date filters.
- Reviewed fulfillment, cancellation, and in-transit indicators.
- Prepared a client-friendly summary for performance review.

A clean reporting workflow helps sellers quickly understand what happened during the month and where operations need attention.

Objective

Turn backend order data into simple operational insights.

01

Accuracy-first order review

Verify date filters and order counts

02

Fulfillment monitoring

Track shipped, in-transit, unpaid, and canceled status

03

Monthly reporting

Present results in a simple client-ready format

04

Operational clarity

Support better decision-making

Goal

Track order performance, monitor cancellation or fulfillment issues, and improve operational visibility for the TikTok Shop.

The work is designed to help the seller see monthly volume changes, spot status patterns, and decide where to focus next.

Monthly Breakdown

Performance summary based on the visible TikTok Shop screenshots.

Month / Period	Total Orders	Completed	Pending / Processing	Canceled	Trend
February 2026 01/02–28/02	564	Visible in list	Shipped tab: 141	Visible in list	Baseline month
March 2026 01/03–31/03	698	Visible in list	Shipped tab: 141	Visible in list	+134 orders vs February (+23.8%)
April–Early May 01/04–08/05	432	Not primary in sample	In transit / unpaid visible	Visible in list	Partial period; active fulfillment status visible

Note: Exact status-level totals for Completed, Pending/Processing, and Canceled are not fully shown in the screenshots. The reliable monthly totals visible are 564, 698, and 432 orders.

Total orders across screenshots: 1,694

March shows the strongest monthly order volume in the provided data.

Order Volume Trend

A quick view of order count changes across the three periods.

Insight Order volume increased from February to March, then dropped in the April–early May filter. Since the final period is not a clean full-month screenshot, it should be compared with caution.

Fulfillment & Operational Monitoring

Important operational signals visible in the screenshots.

0	0	0	0	100%
Shipping overdue	Cancellation alert	Logistics issue	Return / refund requested	On-time shipment
No overdue shipping shown	No active cancellation alert shown	No logistics issue shown	No active refund issue shown	Target: 95%

Visible status examples

- February and March screenshots show completed and canceled order rows.
- April–early May screenshot shows unpaid, in-transit, and canceled order rows.
- The Shipped tab displays 141 in each screenshot, showing an active fulfillment queue/filter indicator.

Key Insights

What the monthly review tells the client.

Growth signal

March reached 698 orders, up 23.8% from February. This indicates stronger store activity during the second month.

Volume change

The April–early May period shows 432 orders. Because the filter covers a partial period, it should not be treated as a full-month decline without exported data.

Operational health

No active shipping overdue, logistics issue, or return/refund alert was visible at the time of review.

Reporting need

Exported order data would allow exact status totals, SKU-level review, and better cancellation analysis.

Tools & Skills Used

Practical operations support for TikTok Shop sellers.

- TikTok Shop Seller Center backend review
- Order filtering by monthly date range
- Order status tracking and fulfillment monitoring
- Excel / Google Sheets reporting workflow
- Client-ready performance summary writing

Outcome

Regular order tracking gives sellers a clear view of monthly performance, fulfillment health, cancellation patterns, and sales activity. This helps the store make faster operational decisions and maintain a better customer experience.

Portfolio Summary

TikTok Shop Monthly Order Management & Performance Reporting

This case study demonstrates the ability to review backend order data, identify monthly performance changes, monitor fulfillment status, and present clear insights for store operations.

- 1,694 total orders reviewed from the provided screenshots.
- March was the strongest period with 698 orders.
- Operational alerts were clear at the review time, with no overdue shipping or logistics issues visible.
- Reporting supports better planning, faster action, and stronger seller operations.

Manage orders

Introducing the new logistics menu

- Centralized overview to track fulfillment and logistics performance at a glance
- Compare shipping methods easily to select the best option for your shop
- Streamlined sub-menu for efficient management of warehouses, fulfillment, and shipping details
